

Do you have the next great idea? Do you lack knowledge and support to make it happen? Then **Silicon Sumpun** (*working title*) is the place for you!

There are a lot of people out there with great visions and business ideas but without the help and means to execute them. What if Sundbyberg could be your first step on the road to Silicon Valley and the hotspot for every young (or not so young) creative with an idea and an ambition?

To achieve this, we want to build a new type of co-working workspace that is open for everyone. You don't need any background skills like web development, product design or a business degree. The only thing you need is an idea and the passion to make it happen!

How it works? We want to take the standard co-working space into the year 2030 by adding a "Genius Bar" in the middle of every workspace. The geniuses will help first time business owners with anything from creating a website & product design to making a sustainable businessplan.

These startup help centers could be divided into different fields like:

- E-commerce - Create your very own online store
- Mobile applications - Create that one app idea you know will revolutionize the world
- YouTube specialists - Get help to start your own money making YouTube channel
- Gadgets/Prototypes - Make your own prototype come to life using for example 3D printing.

The "Genius Bars" inside the startup help center will be filled with industry experts who wants to motivate and help the first timers start their very own business.

The startup center will be equipped with state of the art technology and all you will need to work and spend time in a fun and social environment.

Every morning a self driving electric car will pick you up at home and bring you to work. If your kids are too young for school, just take them with you to Silicon Sumpan's daycare facility. When entering the workplace you won't have to worry about forgetting your keys or ID card, you simply gain access with your digital chip implant.

New technology will save you time by making tedious tasks like answering emails easier and faster using voice recognition and automatic text processing. All your hardware will be very slim and almost weightless so that you can carry them anywhere.

Of course everywhere you have access to wireless internet and electricity so you don't have to worry about charging or plugging into anything.

There is also plenty of spaces to meet people from other offices/floors/companies where you can relax, play fun games, eat food together and socialize. There will also be access to resting rooms where you can have a nap or simply just spend the night.

In 2030, we think of Sundbyberg as the absolute hotspot for the next generation of creatives who want to set up their first business. And that it will give birth to many innovative companies and job opportunities all over the world!
